No. 3 NORTH SIDE KING SQUARE, ST. JOHN, N. B.

Tracadie.—The tower from which the inner or back range light at Tracadie was exhibited, at the west entrance to Tracadie Bay, on the north or Gulf of St. Lawrence coast of Prince Edward Island, has been replaced by a new tower. Approximate position: Latitude N $46^{\circ} 25' 35''$; longitude W $63^{\circ} 2' 30''$. The new tower is a square, wooden building, painted white. The upper portion of the tapering building forms the lantern. The height from the ground to the top of the ventilator is 28 feet. The light is a fixed red, catoptric light. It is elevated 32 feet above high water mark, and should be visible in the line of range and up the coast in a northwesterly direction 8 miles. The tower stands on the gravel beach, near the site of the old one which it replaces, 1,200 feet S S W from the front range light; but this course and distance is liable to be changed at any time, without notice, to make the alignment suit the changes in the shifting channel.

Petitdegrat Island, C. B.—The fixed red light in Petitdegrat Inlet, southeast of Madame Island, in the county of Richmond, C. B., has always been described and shown as being on Big Arrow rock, whereas it is built and has always been maintained on Mouse Island, farther up the inlet. Latitude N $45^{\circ} 29' 54''$; longitude W $60^{\circ} 57' 24''$.

South Tracadie.—The front range light building at South Tracadie, on the northeast, or Gulf of St. Lawrence, coast of New Brunswick, has been moved 80 feet northeastwardly to suit a change in the channel over the bar which lies outside of South Tracadie Gully. Latitude, $47^{\circ} 30' 05''$; longitude, $64^{\circ} 52' 10''$. The front tower now stands 276 feet SE by S $\frac{3}{4}$ S (S 51° E true) from the back range light, and the two lights in one lead in from the strait NW by N $\frac{3}{4}$ N (N 51° W true) through the channel over the bar.

North Tracadie Gully.—The channel over the bar at North Tracadie Gully, off the northeast coast of New Brunswick, Gulf of St. Lawrence, which was marked by range lights on the north side of the Gully, is now filling up and a new channel through the bar has formed farther north. As this new channel now carries much better water and is much shorter than the old one, the buoys and lights have been rearranged to lead through it, as follows:—The range lights on the north side of the Gully have been discontinued. The front building of this range has been moved back to the south side of the Gully and has been placed so as to form a range with the main light to lead through the channel over the bar. It now stands 109 feet SE by E $\frac{1}{2}$ E from the main light in the tower. It is, as heretofore, fixed white, shown from a lantern hoisted on a pole 20 feet high, having a small shed at its base, painted white. The light is elevated 24 feet above high water mark, and should be visible 6 miles. The lantern is a tubular lantern with a pressed glass lens. The red can buoy which formerly marked the outer end of the more southerly channel has been moved northwards to mark this new channel. It is now moored in five fathoms on the outer edge of the bar at the point where vessels should cross it and pick up the line of the range lights, and bears SE by E from the main light. To mark the channel over the bar three red spar buoys have been placed at the turn on the north side of the channel, and a black spar buoy and a red can buoy on the south side. A red spar buoy is also moored on the east point of the sand bar inside the Gully southwestwardly from the main light tower. The channel is between this buoy and the light-house. Vessels entering the Gully should bring the two lights in range, and steer NW by W $\frac{1}{2}$ W until near the inner can buoy, then they should haul up north by west, round the south end of the beach,

Shediac North Channel Range Lights.—Two range lights, temporarily established by the government of Canada on the beach at Pointe du Chene, Shediac Bay, Northumberland Strait, on the east coast of New Brunswick, for the purpose of guiding vessels into Shediac harbor through the channel north and west of Zephyr and Medea rocks, were put in operation on the 29th August, 1895. The mast on which the front range lantern is hoisted, stands on the northern-most part of Pointe du Chene, 349 feet from the water's edge, and is 20 feet high, with a shed at its base, painted white. Latitude, $46^{\circ} 14' 43''$ N; longitude, $64^{\circ} 30' 48''$ W. The light is a fixed red light elevated 32 feet above high water mark, and should be visible 7 miles in, and over a small arc on each side of, the line of range. The light is shown from a tubular lantern with pressed glass lens. The back mast stands 602 feet SW by S ($S 10\frac{1}{2}^{\circ}$ W true) from the front one and is 28 feet high, with a white shed at its base. The light is similar to the front one, is 38 feet above high water mark, and should be visible 7 miles. To enter Shediac harbor by this channel vessels should steer for Cassie Point light until they bring these two red lights in one, bearing SW by S ($S 10\frac{1}{2}^{\circ}$ W true), and should keep them in one until they reach the alignment of Shediac Island range lights, when they haul up W by N $\frac{1}{4}$ N ($S 81^{\circ}$ W true). As when entering by the South channel they keep the Shediac Island range lights in one until the Pointe du Chene railway wharf lights are brought into range.

light elevated 36 feet above high water mark, and should be visible 11 miles in, and over a small arc on each side of, the line of range. It will also show southwardly into the harbor. The back tower stands near the inner shore of the island and is distant 619 feet W by N ¼ N from the new front tower. It is in the alignment of the old lights. The building and light are similar to those above described for the front light, except that the tower is 47 feet high and that the light is 52 feet above high water mark and should be visible 12 miles in the line of range. The two lights in one bearing W by N ¼ N (S 81° W true) will lead into Shediac harbor from Northumberland Strait, south of Medea and Zephyr rocks, with nowhere less than 15 feet water, and should be kept in one until the Pointe du Chene railway wharf lights are brought into one.

Shediac Harbor Range Lights.—The front range light mast and shed in Shediac Harbor has been removed from its position on the extremity of Point du Chene North Railway Wharf to a new site on the north west corner of the Government Breakwater, a distance of 358 feet N E ¾ N from its former position, and also the back range light mast and shed on the extremity of the South Railway Wharf 23½ feet S E ¾ E, or at right angles to the line of range from its former position. New position of outer light: Lat N 46° 14' 39", long W 64° 31' 41". The two lights are 631 feet apart and lead in S W ½ S (S 15° 20' W true) from the intersection with the Shediac Island range alignment through the middle of the channel. This new alignment of the harbor lights cuts the alignment of the Island lights 78 feet farther west than the old alignment. In other respects the lights and buildings are not altered.

harbor, give the light a good berth to clear Eastern Point Ledge (spar buoy); then, when the light bears N E $\frac{3}{4}$ N, run N W $\frac{1}{2}$ N until the upper harbor light bears N E by N $\frac{1}{2}$ N, then run for it, and anchor $\frac{1}{2}$ mile S by W from the light. Also, a bell struck by machinery, a double blow every 20 seconds.

Whistling Buoy off Eastern Point; a first-class whistling buoy, painted black and white in perpendicular stripes, moored in about 32 fathoms of water, $3\frac{1}{2}$ miles (S S E mag.) from Eastern Point light house. The whistle on this buoy will give a sharp shrill sound to distinguish it from the whistling buoy located about $\frac{1}{2}$ mile S by W from Eastern Point light house.

Gloucester Harbor Light, on Ten Pound Island, east side of entrance to inner harbor; brown tower; flashing white light every 5 seconds; visible 12 miles; to enter harbor, bring this light to bear N E by N $\frac{1}{2}$ N, and run for it until Eastern Point Light bears S S E, and anchor in channel way or continue until Eastern Point light bears S, then steer E N E until Ten Pound Island light bears N, and anchor in S E harbor, in from 4 to 6 fathoms—hard mud; or, from this point steer about N W by N between Ten Pound Island Ledge buoy and Ten Pound Island (giving the point of the Island a good berth), until the light bears E, then steer N $\frac{1}{2}$ E until the light bears S by E, and anchor in western harbor.

Automatic Buoy; a whistling buoy is moored $\frac{3}{4}$ of a mile, S by W from Eastern Point Light, permanently kept.

Baker's Island Lights; latitude $42^{\circ} 32' 12''$ N; longitude $70^{\circ} 47' 11''$ W; two white towers, ranging S E and N W; fixed white light, visible 16½ miles; located on the north end of Baker's Island, south side of entrance to Salem and Beverly harbors. In coming from the southward vessels bound to Salem keep the lowest light open to the east of the high light, and run for it; this guides to the eastward of the South-east Breakers and Searl's Rock. Give Baker's Island a berth of not less than half a mile, leaving it on the port hand, then run for Hospital Point Light, bearing about W by N $\frac{1}{2}$ N, until Derby Wharf light is in range with Fort Pickering light, when Salem harbor will be to the W S W of you, and Beverly harbor W by N $\frac{1}{2}$ N. Also, a bell struck by machinery, a single and a double blow alternately, intervals 30 seconds. For better information, a lens panel has been placed in "Hospital Point" Light, which makes a more brilliant light in the line of the ships' channel from Baker's Island than on either side, and serves to keep vessels from danger on either side.

Hospital Point; white tower; fixed white light, visible 13½ miles; on Hospital Point, north side of entrance to Salem and Beverly Harbor.

Fort Pickering Light; brown tower; fixed white light, visible 10½ miles; on Winter Island, north side of entrance to Salem harbor. On entering Salem harbor from near Hospital Point, get Derby Wharf light in range with Fort Pickering light to clear the Haste Shoal; good anchorage half a mile S W by S from this light, with Derby Wharf light bearing W by S.

Marblehead Light, on Marblehead Neck, SE side of entrance to Marblehead, and to Salem South Channel; white tower; fixed white light, visible 11 miles; good anchorage half a mile W by S from this light. To enter harbor, bring the light to bear N W, and run for it until within two miles of it, then bring it to bear W N W, and run for it, leaving Marblehead Rock (a high rocky islet with beacon at top) 150 yards on your port hand, and when it

bears S W run N W $\frac{3}{4}$ N until the light bears S by W, then run S W $\frac{3}{4}$ W into the harbor, and anchor between the light and the town.

Egg Rock Light; white tower; fixed red light, visible $8\frac{1}{2}$ miles; guide to Swampscot anchorage and to Broad Sound. Leave it $1\frac{1}{2}$ miles on the starboard hand on entering Broad Sound.

Minot's Ledge Light; latitude $42^{\circ} 16' 11''$ N; longitude $70^{\circ} 45' 35''$ W; entrance to Boston Bay; dark gray granite tower, 100 feet high; flashing white, signalling the number 143 every 30 seconds, thus: 1 flash; eclipse about 3 seconds; 4 flashes; eclipse about 3 seconds; 3 flashes; eclipse about 15 seconds. Davis' Ledge Buoy bears E by S; Boston light bears N W $\frac{1}{2}$ W, 7 miles. This course must be kept good, northerly, to pass Bell Boat, off the north side of the Harding's Ledge (about $4\frac{1}{2}$ miles from Minot's Ledge Light). A good mark to clear the Harding's Bell Boat, after passing Minot's light, is to keep Long Island Head light (fixed white) just open to the north of the Narrows Light, which is a red light.

Nix Mate Light Buoy.—A gas buoy, painted black and showing a fixed white light, just inside of Nix Mate bell buoy, entrance to Boston harbor, Mass. If the ice runs strongly, this and similar buoys in the entrances to Boston harbor will be taken up.

Harding Ledge and Centurion Rocks.—A light buoy, painted black and showing a fixed white (gas) light, was placed just inside of Harding Ledge bell buoy, entrance to Boston harbor. The light buoy is moored in 48 feet of water, on the following bearings: Minot's Ledge lighthouse S $58^{\circ} 30'$ E true (S E $\frac{1}{2}$ E mag); Harding Ledge beacon S 41° W true (S W $\frac{3}{4}$ W mag); Boston lighthouse N 60° W true (N W $\frac{1}{2}$ W mag). North end of Centurion buoy a light buoy, painted black, numbered 5, and showing a fixed white (gas) light.

Boston Light; latitude $42^{\circ} 19' 41''$ N; longitude $70^{\circ} 53' 26''$ W; on Little Brewster Island, north side of entrance to main ship channel to Boston; white tower; white flash light, flashing once every half minute, visible $15\frac{1}{2}$ miles. First-class steam siren; blasts 5 seconds, alternate silent intervals of 10 and 40 seconds. From Cape Cod highlands the course for Boston Light is N W by W $\frac{1}{2}$ W, which well clears Minot's Ledge and the Hardings; then, when well past Minot's, bring Boston light to bear W by N $\frac{1}{2}$ N and run for it until within $\frac{1}{2}$ of a mile of it or until the Beacon light bears about W by N, then run W $\frac{1}{2}$ S until the Beacon light bears W N W, then run W by N leaving the Beacon light 100 yards on your starboard hand, then run N W $\frac{1}{2}$ W (keeping the middle of the channel) for the Narrows between Galloups and Lovell's Islands, then about N W $\frac{3}{4}$ N for the bell buoy off Nix's Mate, which leave on port hand, then run W by N $\frac{1}{2}$ N for Fort Independence, leaving the lower middle buoy, red can, No. 6, a good berth on your starboard, and State Ledge buoy, red Nun No. 8 close aboard on your starboard; then run about N W $\frac{1}{2}$ N for the upper middle buoy, black Nun No. 9, which leave on your port, then the course to Long Wharf or to good anchorage is about N W $\frac{1}{2}$ W. If making Boston ship channel from Cape Ann, get Thatcher's Island light to bear N N W from 2 to 3 miles, then steer S W $\frac{1}{2}$ W until Boston light bears W by N $\frac{1}{2}$ N. Then proceed as before given.

Narrows Light; black lantern on white hexagonal dwelling, pile foundation; fixed red light, visible $8\frac{1}{2}$ miles; on the right hand side of Narrows. in Ship Channel entrance to Boston harbor; also, a bell struck by machinery every 20 seconds.

Deer Island Light; on the south extremity of the Spit, making out $\frac{1}{2}$ mile to the southward from Deer Island entrance to Boston Harbor; fixed white,

In coming up ship channel, and after leaving Nix's Mate buoy on the port hand, and Long Island Light bears W by S $\frac{1}{2}$ S, run W by N $\frac{1}{4}$ N for the south end of the Castle until the Castle North Wharf bears N W by W $\frac{3}{4}$ W, or abreast of the State Ledge Buoy (red, No. 8), then N W $\frac{1}{4}$ N to the Upper Middle Buoy (black, No. 9), which leave on port hand, then the course to Long Wharf is N W $\frac{1}{4}$ W. But if approaching Boston from Cape Ann, via Broad Sound, bring Long Island Light to bear S W by W, and run for it until Deer Island Point Beacon bears N W by N $\frac{1}{2}$ N, three-eighths of a mile distant, then W by N $\frac{1}{4}$ N up the harbor. Strangers should bear in mind that in the middle of Broad Sound there is but 8 feet of water at low tide; but by keeping on the southern side of the Sound, leaving the Graves Whistling Buoy $\frac{1}{2}$ a mile on your port hand and the Devil's Limb Buoy (black can No. 1) $\frac{1}{4}$ mile on port hand, and running straight to Ram's Head buoy (black can buoy No. 5) about W S W, passing Aldrich's Ledge buoy (black can No. 3) $\frac{1}{4}$ mile on port, then leaving Ram's head 50 yards distant on port, and run about W $\frac{1}{4}$ S to clear Deer Island Point Beacon, you can carry 12 feet safely. From the Beacon you will steer W $\frac{3}{4}$ N for lower middle buoy, then W by N $\frac{3}{4}$ N for State Ledge Buoy, when proceed as before given.

Fig. No. 2—This signal indicate "moderate gale is expected at first from a westerly direction."

Fig. No. 3—This signal indicate "fresh to heavy gale is expected at first from an easterly direction."

Fig. No. 4—This signal indicate "fresh to heavy gale is expected at first from a westerly direction."

The Cone, when hoisted by itself indicates that it is expected that the wind will attain a velocity of 30 miles an hour, but will not exceed 40 miles and it is not intended that an ordinarily well found vessel should stay in port but simply as a warning to mariners that strong winds are expected from the quarter indicated.

The Drum will always be hoisted when the velocity of the wind is expected to exceed 40 miles an hour.

The night signal corresponding to Nos. 1 and 3, is two white lantern hanging perpendicularly.

Night signal corresponding to Nos. 2 and 4, is two white lanterns hanging horizontally.

Note 1—Mariners will be able to obtain further information from Storm Signal Agents, or by consulting the daily probabilities.

Note 2—Mariners must always bear in mind that the storm signals are merely cautionary, and do not necessarily mean that a storm will occur at the place where the signal is displayed, but that one is expected either there or within such a distance that vessels leaving port would be liable to be caught in it.

Morning and Evening Stars.

VENUS is an evening star until April, when she is in inferior conjunction with the sun, and a morning star for the remainder of the year.

MARS is an evening star until November, when he is in conjunction with the sun, and a morning star for the remainder of the year.

JUPITER is a morning star until February, when he is in opposition to the sun, then an evening star until September, and a morning star for the remainder of the year.

Explanatory.

Annular Eclipse—An eclipse of the Sun, in which its whole disk is covered by the Moon, except a bright outer ring.

Aphelion—The point of a planet's orbit farthest from the Sun.

MILLAN'S.

J. & A. McMILLAN FURNISH ESTIMATES FOR SOCIETY PRINTING.**Apogee**—That part of the Moon's orbit farthest from the Earth.**Astronomical Day** is reckoned from noon to noon through the 24 hours. Thus, July 21, 9h., is 9h. A. of July 21, and July 21, 15h., is 3h. M. of July 22.**Conjunction**—A planet directly between the Earth and the Sun is said to be in Inferior Conjunction with the Sun. A Planet with the Sun directly between it and the Earth is said to be in Superior Conjunction with the Sun. Planets are said to be in conjunction with each other, or with the Moon, when they are in the same sign and degree.**Declination**—The distance of a heavenly body from the Equinoctial, measured north or south, in degrees or minutes, on a Meridian.**Ecliptic**—The plane of the Earth's orbit, so called because Eclipses can take place only when the Moon is on or near it.**Elongation**—The distance of a Planet from the Sun as seen from the Earth.**Equinoctial**—The circle in the heavens traced by the Earth's Equator.**Node**—That part of the orbit of a heavenly body which intercepts the Ecliptic. If the body is passing from south to north, it is called the Ascending Node; if from north to south, Descending.**Opposition**—A planet with the Earth directly between it and the Sun is said to be in opposition to the Sun.**Penumbra**—That portion of space around the shadow of the Earth, in passing through which the Moon diminishes in brightness in consequence of a part only of the Sun's rays reaching her surface.**Perigee**—That part of the Moon's orbit nearest to the Earth.**Perihelion**—That part of the Planet's orbit nearest to the Sun.**Quadrature**—Two heavenly bodies are said to be in Quadrature when they are distant from each other by one-fourth of the Zodiac, or three signs apart.**The Sun's Declination** and fast or slow of clock are given for apparent noon or time of passing the Meridian of St. John.**The Moon's Southing** is given in Astronomical time for the Meridian Passage at St. John; and her Declination, when on the Meridian.**The Rising and Setting** of the Moon are given for every day in the year.

To find the length of the day, subtract the time of sunrise from 12 hours, and to the difference add the time of sunset.

To find the length of the night, subtract the time of sunset from 12 hours, and to the difference add the time of sunrise next morning.

Tides.

When the Moon is near the Full, and change, the Tides rise higher than usual—these are called Spring Tides; and when the Moon is near her first and third quarters the Tides rise less than usual—these are called Neap Tides. If the Moon near the full or change is in her Perigee, or nearest approach to the Earth, it will be very high Tides, and if at that time she is in her Apogee, or farthest distance from the Earth, the Tides will flow much less.

On account of the disturbing force of the winds it is not possible at times (by astronomical calculations) to predict the exact time and height of high and low water; when the winds blow strong on shore, the effect is to increase the Tides and make them later, but when the winds blow off shore, the effect is to diminish them and make them earlier.

The Tides in the Calendar are the Morning and Afternoon Tides at St. John and Charlottetown. In the Tide Table (page 53) will be found Constants for finding the time of High Water at each of the places given in the table.

It will sometimes be found that when a Constant is added to the time of High Water at the port of reference the sum exceeds 12 hours; in this case subtract 12 hours from the sum and the remainder will be the time of High Water at the required port on the succeeding afternoon or morning, according as the Tide at the port of reference was a Morning or Afternoon Tide.

EXAMPLE.

High Water at St. John, January 3rd.....	11h. 32m. M.
Moncton, add.....	54m.
	12h. 26m.
Subtract.....	12h. 00m.
High Water at Moncton, January 3rd.....	0h. 26m. A.

It will sometimes be found that a Constant to be subtracted is greater than the time of High Water at the port of reference; in this case add 12 hours to the time at the port, subtract the Constant, and the remainder will be the time of High Water at the required place for the previous Morning or Afternoon, according as the Tide at the port of reference was an Afternoon or Morning Tide.

EXAMPLE.

High Water at Charlottetown, January 5th.....	0h. 25m. A.
Add.....	12h. 00m.
	12h. 25m.
Newcastle, Beaubère Island, subtract.....	4h. 15m.
High Water at Beaubère Island, January 5th.....	8h. 10m. M.

Forecasting the Weather.

Men have, from a very early period, studied the weather, on account of its great influence on their pursuits, in order, if possible, to predict its nature, and prevent those losses to the farmer and the sailor which result from violent storms.

The earlier students based their predictions on the phases of the moon, but an examination of the Greenwich observations for more than half a century has shown that this theory is entirely unfounded. Weather prophets like Moore, Zadkiel and Vennor claim in their almanacs to be able to forecast the weather day by day for a whole year; but meteorological science in the British Isles, and the Signal Service of the United States, with the Weather Bureau of the Dominion, does not claim to forecast, with any certainty, the weather for more than three or four days at the most.

If an observer could obtain, at regular or repeated intervals, readings of the Barometer at stations distributed over a large area, he would be enabled to trace the march of the storm, for it has been found that the wind always blows towards the place of the lowest barometer reading; and so, by means of the telegraph, he may warn those places the storm is approaching. Still, mistakes are often made, and the forecasts are not always infallible, so that much remains to be done before meteorology can be marked among the exact sciences.

PROSPECTUS.

THIS Map has been designed to indicate with as much distinctness as possible the geographical position of the various parts of the British Empire, and their relation to each other for purposes of commerce and defence.

SPECIAL FEATURES OF THE MAP.

1. All the territories of the Empire have a conspicuous and uniform coloring. Spheres of influence are distinguished by a lighter shade of the same color.
2. Prominence is given to the illustration of the great trade routes, and of the coaling and naval stations which give these routes security, and form connecting links around the world.
3. By repeating Australia and the countries of the Far East, the approach to them by the Western as well as by the Eastern route is shown, and thus the continuity of maritime connection around the Empire is illustrated more fully than in ordinary maps.
4. The relation of Canada to the Empire is also thus shown most effectively, and the Map was used at the Ottawa Conference of 1894 in the discussions on steamship and cable routes.
5. An inset Map shows the system of telegraphic and cable communication between Canada and all other parts of the world.

To Find the Latitude by a Meridian Altitude of the Sun.

The Sun's Declination in the Calendars of the Month are for the Meridian of St. John, N. B., but will serve with sufficient accuracy to obtain the Latitude by Meridian Altitude of the Sun on any part of the coast of New Brunswick and Nova Scotia, and on the coast of Maine and Massachusetts, in the United States.

Rule.—At noon obtain the altitude of the Sun by a Sextant or Quadrant; add 12 miles to that altitude to obtain the true altitude; subtract the true altitude from 90° 0', and you will have the Sun's Zenith distance, which you will name North, as the Sun will always bear to the South at noon on that coast. Under the Zenith distance place the Sun's Declination for that day. Then if the Declination and Zenith distance are of different names, their

Letters containing gold or silver money, jewels, or precious articles, or anything liable to Customs duties, cannot be forwarded by post to any of the Postal Union countries except the United States.

Important.—A letter once posted becomes the property of the person to whom it is addressed, and must be forwarded according to its direction. On no application, however urgent, can it be delivered back to the writer, or to any other person.

To enclose writing, intended to serve the purposes of a letter, in a newspaper packet or in a parcel, is an offence punishable by a fine of from \$10 to \$40.

Sale of Postage Stamps.—Any person, other than a Postmaster, who engages in the sale of Postage Stamps or Stamped Envelopes, without being duly licensed by the Postmaster General, is liable, on conviction before a Justice of the Peace, to a penalty of \$40 for each offence.

Request Letters.—Unregistered letters from places in Canada, Newfoundland and the United States, enclosed in envelopes having *printed thereon* a REQUEST that the letters be returned to the sender if not delivered within a certain specified time, will be returned as requested, if not delivered at the time stated.

Useful Hints.

Never send money or other articles of value through the Post Office except either by Money Order or Registered Letter.

Make complaints and inquiries in writing.

Envelopes closed and simply clipped at the ends cannot be forwarded by Book Post. Affix stamps securely, and on the upper right hand corner.

Register all valuable letters.

Send money by Money Order whenever practicable.

Preserve, and request correspondents to preserve, envelopes of mis-sent or delayed letters.

Business men should be careful to authorize but a limited number of persons to receive their letters, and only those in whom they have full confidence.

Have a letter box on the door of residence and office.

Letters addressed to mere initials, or fictitious names, will not be delivered, unless addressed in care of a resident, or to some box in the Post Office.

Mutilated Stamps.

Letters having mutilated stamps, or stamps so soiled and defaced as to make it impossible for the sorting clerks to decide whether they have been used before or not, will be sent to the Postmaster General for his adjudication; and if it can be shown that such stamps had been previously used, the offender will be liable to a fine of from \$10 to \$40.

Post Bands and Stamped Envelopes.

One cent post bands for newspaper or book packet wrappers; and one and three cent stamped envelopes and two and three cent letter cards are issued by the Department, and may be had at the stamp vendors at a trifle above their face value.

Merchants' Boxes.

Rent of small box \$4, and of large box \$6 a year.

Though every effort will be made in sorting letters to place them in the boxes, when the party addressed is known to have a box, the Postmaster does not hold himself responsible for this always being done, the primary rules being that all letters bearing the number of the house and name of street go there by the letter carrier.

An order to place in a box letters belonging to another person than the owner of the box, cannot be recognized unless such letters are addressed to the care of the box or its owner.

Letters for a member of a firm should be addressed to the care of the firm or the number of the box.

Box-holders would facilitate the work of sorting by requesting correspondents to add the box number to the address of their letters.

St. John Letter Carriers' Delivery.

Letters and Papers should be addressed to Street and Number.

Change of residence should be promptly notified to the Postmaster.

Two deliveries daily, commencing at 7.30 a m and 3.00 p. m. On public holidays there is no afternoon delivery.

Letters not bearing the name and number of street, addressed to parties whose address may be known to the Carriers, will be delivered by them. It is always best, however, to have name of street and number of house supplied.

Weights and Measures Inspection.

The Weights and Measures Act provides that two gallons shall be a peck, and eight gallons a bushel, and that after January 1st, 1886, in contracts for the sale and delivery of any of the undermentioned articles, the bushel shall be determined by weight, unless convenience for weighing are not available, or unless a bushel by measure is specially agreed on in writing, the weight equivalent to a bushel being as follows: Wheat, 60 lbs; Indian corn, 56 lbs; rye, 56lbs; peas, beans and clover seed, 60 lbs; barley, timothy seed and buckwheat, 48 lbs; malt, 36 lbs; oats, 34 lbs; flaxseed, 50 lbs; hempseed, 44 lbs; blue grass seed, 14 lbs; castor beans, 40 lbs; potatoes, turnips, carrots, parsnips, beets and onions, 60 lbs; bituminous coal, 70 lbs. Power is also

given to the Governor-in-Council to specify the weight of other articles equivalent to a bushel. Violations of the foregoing provisions subject the offender to a penalty not exceeding \$25 for the first offence, and not exceeding \$50 for each subsequent offence.

ADDITIONAL REGULATIONS.

1. All apples packed in Canada for sale by the barrel shall be packed in good and strong barrels of seasoned wood, made as nearly cylindrical as may be; the staves of such barrels shall be twenty-seven inches in length from croe to croe, with heads from sixteen and one-half to seventeen inches in diameter; and such barrels shall be sufficiently hooped with a lining hoop within the chimes, the whole well secured by nails.

2. Every person who offers or exposes apples for sale by the barrel, otherwise than in accordance with the foregoing provisions of this section, shall be liable to a penalty of twenty-five cents for each barrel of apples so offered or exposed for sale.

Division of St. John—J. B. Wilmot, Inspector; E. Cowan and Levite Theriault, Assistant Inspectors; comprising the city of St. John, counties of St. John, Charlotte, Queens, York, Sunbury, Carleton, Madawaskas, and Victoria.

Division of Kings—W. B. Scovil, Inspector; David Richard, Assistant Inspector; comprising the counties of Albert, Gloucester, Kent, Kings, Northumberland, Restigouche and Westmorland.

Time Ball, Customs Building.

The Ball will be hoisted half its elevation each day (Sunday excepted) at fifteen minutes before one o'clock. At one minute before one o'clock it will be hoisted its full height; and at one o'clock, mean time, the Ball will be dropped. A chronometer keeping correct Greenwich time should then show 5h. 24m. 16s., and the difference between this and the time shown by a chronometer is its true error on Greenwich time at the moment. As the above hour of one o'clock, when the ball drops, represents 5h. 24m. 16s. at Greenwich, the error of a chronometer may be ascertained, no matter where the ship is lying. Masters of vessels arriving at St. John should compare their chronometers by the Time Ball, as it will enable them to get the sea rate, which frequently varies from harbor rates. Latitude 45° 16' 42" North. Longitude in time 4h. 24m. 16s. west of Greenwich.

D. LEAVITT HUTCHINSON, *Director.*

P. S.—Any shipmaster entering this port, keeping a Meteorological Register who may be desirous of having the accuracy of their barometers verified, can do so by comparison with the standard at the Observatory. D. L. H.

Synopsis of the Fishery Laws of the Dominion of Canada as Regards Salmon and Trout.

Net fishing of any kind is prohibited in public waters, except under leases or license from the Department of Fisheries.

The size of nets is regulated so as to prevent the killing of young fish. Nets cannot be set or seines used so as to bar channels or bays.

The netting of trout is prohibited. A general weekly close time is provided, in addition to special close seasons. Salmon nets must be raised from 6 p. m. on Saturday to 6 a. m. on Monday, and angling for salmon is prohibited from 9 p. m. on Saturday to 6 a. m. on Monday. Close time for "fly-fishing" for salmon begins 15th August.

The use of explosive or poisonous substances for catching or killing fish is illegal.

[Notice has been given that a standard regulation salmon net will be established and adopted by the Department of Fisheries, to come into use in the year 1891, and therefore no other net will be sanctioned for the capture of salmon in any of the waters of the Bay Chaleur or elsewhere.]

NEW RULES OF THE ROAD AT SEA.**REGULATIONS FOR PREVENTING COLLISIONS AT SEA.**

ART. 1. In the following rules every steamship which is under sail and not under steam is to be considered a sailing ship; and every steamship which is under steam, whether under sail or not, is to be considered a ship under steam.

Rules concerning Light.

ART. 2. The lights mentioned in the following Articles, numbered 3, 4, 5, 6, 7, 8, 9, 10, and 11, and no others, shall be carried in all weathers, from sunset to sunrise.

ART. 3. A seagoing steamship when under way shall carry—

- (a) On or in front of the foremast, at a height above the hull of not less than 20 feet, and if the breadth of the ship exceeds 20 feet, then at a height above the hull not less than such breadth, a bright white light, so constructed as to show an uniform and unbroken light over an arc of the horizon of 20 points of the compass, so fixed as to throw the light 10 points on each side of the ship, viz, from right ahead to two points abaft the beam on either side, and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least five miles.
- (b) On the starboard side, a green light so constructed as to show an uniform and unbroken light over an arc of the horizon of 10 points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the starboard side, and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least two miles.
- (c) On the port side, a red light, so constructed as to show an uniform and unbroken light over an arc of the horizon of 10 points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the port side, and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least two miles.
- (d) The said green and red side lights shall be fitted with inboard screens projecting at least three feet forward from the light, so as to prevent these lights from being seen across the bow.

J. & A. McMILLAN PUBLISH McMILLAN'S MAP OF NEW BRUNSWICK.

ART. 4. A steamship, when towing another ship, shall, in addition to her side lights, carry two bright white lights in a vertical line one over the other, not less than three feet apart, so as to distinguish her from other steamships. Each of these lights shall be of the same construction and character, and shall be carried in the same position, as the white light which other steamships are required to carry.

ART. 5. (a) A ship, whether a steamship or a sailing ship, which from any accident is not under command, shall at night carry, in the same position as the white light which steamships are required to carry, and, if a steamship, in place of that light, three red lights in globular lanterns, each not less than 10 inches in diameter, in a vertical line one over the other, not less than three feet apart, and of such a character as to be visible on a dark night, with a clear atmosphere, at a distance of at least two miles; and shall by day carry in a vertical line one over the other, not less than three feet apart in front of but not lower than her foremast head, three black balls or shapes, each two feet in diameter.

(b) A ship, whether a steamship or sailing ship, employed in laying or in picking up a telegraph cable, shall at night carry, in the same position as the white light, which steamships are required to carry, and, if a steamship, in place of that light, three lights in globular lanterns, each not less than 10 inches in diameter, in a vertical line over one another, not less than six feet apart; the highest and lowest of these lights shall be red, and the middle light shall be white, and they shall be of such a character that the red lights shall be visible at the same distance as the white light. By day she shall carry in a vertical line one over the other, not less than six feet apart, in front of but not lower than her foremast head, three shapes not less than two feet in diameter, of which the top and bottom shall be globular in shape and red in color, and the middle one diamond in shape and white.

(c) The ships referred to in this Article, when not making any way through the water, shall not carry the side lights, but when making way shall carry them.

(d) The lights and shapes required to be shown by this Article are to be taken by other ships as signals that the ship showing them is not under command, and cannot therefore get out of the way. The signals to be made by ships in distress and requiring assistance are contained in Article 27.

ART. 6. A sailing ship under way, or being towed, shall carry the same lights as are provided by Article 3 for a steamship under way, with the exception of the white light, which she shall never carry.

ART. 7. Whenever, as in the case of small vessels during bad weather, the green and red side lights cannot be fixed, these lights shall be kept on deck, on their respective sides of the vessel, ready for use; and shall, on the approach of or to other vessels be exhibited on their respective sides, in sufficient time to prevent collision, in such manner as to make them most visible, and so that the green light shall not be seen on the port side nor the red light on the star-board side.

To make use of these portable lights more certain and easy, the lanterns containing them shall each be painted outside with the color of the light they respectively contain, and shall be provided with proper screens.

ART. 8. A ship, whether a steamship or a sailing ship, when at anchor, shall carry, where it can best be seen, but at a height not exceeding 20 feet above the hull, a white light in a globular lantern of not less than eight inches in diameter, and so constructed as to show a clear uniform and unbroken light visible all round the horizon, at a distance of at least one mile.

J. & A. McMILLAN PUBLISH LOGGIE'S MAP OF NEW BRUNSWICK.

ART. 9. A pilot vessel, when engaged on her station on pilotage duty, shall not carry the lights required for other vessels, but shall carry a white light at the masthead, visible all round the horizon, and shall also exhibit a flare-up light or flare-up lights at short intervals, which shall never exceed fifteen minutes.

A pilot vessel, when not engaged on her station on pilotage duty, shall carry lights similar to those of other ships.

ART. 10. Open boats and fishing vessels of less than 20 tons net registered tonnage, when under way and when not having their nets, trawls, dredges, or lines in the water, shall not be obliged to carry the colored side lights; but every such boat and vessel shall in lieu thereof have ready at hand a lantern with a green glass on the one side and a red glass on the other side, and on approaching to or being approached by another vessel such lantern shall be exhibited in sufficient time to prevent collision, so that the green light shall not be seen on the port side nor the red light on the starboard side.

The following portion of this Article applies only to fishing vessels and boats when in the sea off the coast of Europe lying north of Cape Finisterre :

- (a) All fishing vessels and fishing boats of 20 tons net registered tonnage, or upward, when under way and when not required by the following regulations in this article to carry and show the lights therein named, shall carry and show the same lights as other vessels under way.
- (b) All vessels when engaged in fishing with drift nets shall exhibit two white lights from any part of the vessel where they can be best seen. Such lights shall be placed so that the vertical distance between them shall be not less than 6 feet and not more than 10 feet; and so that the horizontal distance between them measured in a line with the keel of the vessel shall not be less than 5 feet and not more than 10 feet. The lower of these two lights shall be the more forward, and both of them shall be of such a character, and contained in lanterns of such construction as to show all round the horizon, on a dark night with a clear atmosphere, for a distance of not less than three miles.
- (c) A vessel employed in line fishing with her lines out shall carry the same lights as a vessel when engaged in fishing with drift nets.
- (d) If a vessel when fishing becomes stationary in consequence of her gear getting fast to a rock or other obstruction, she shall show the light and make the fog signal for a vessel at anchor.
- (e) Fishing vessels and open boats may at any time use a flare-up in addition to the lights which they are by this Article required to carry and show. All flare-up lights exhibited by a vessel when trawling, dredging, or fishing with any kind of drag net shall be shown at the after part of the vessel, excepting that if the vessel is hanging by the stern to her trawl, dredge, or drag net, they shall be exhibited from the bow.
- (f) Every fishing vessel and every open boat when at anchor between sunset and sunrise shall exhibit a white light visible all round the horizon at a distance of at least one mile.
- (g) In fog, mist, or falling snow, a drift net vessel attached to her nets and a vessel when trawling, dredging, or fishing with any kind of drag net, and a vessel employed in line fishing with her lines out, shall at intervals of not more than two minutes make a blast with her fog horn and ring her bell alternately.

ART. 11. A ship which is being overtaken by another shall show from her stern to such last mentioned ship a white light or a flare-up light.

- (d) When both are running free with the wind on the same side, the ship which is to windward shall keep out of the way of the ship which is to leeward.
- (e) A ship which has the wind aft shall keep out of the way of the other ship.

ART. 15. If two ships under steam are meeting end on, or nearly end on, so as to involve the risk of collision, each shall alter her course to starboard, so that each may pass on the port side of the other.

ART. 16. If two ships under steam are crossing, so as to involve risk of collision, the ship which has the other on her starboard shall keep out of the way of the other.

ART. 17. If two ships, one of which is a sailing ship, and the other a steamship, are proceeding in such directions as to involve risk of collision, the steamship shall keep out of the way of the sailing ship.

ART. 18. Every steamship, when approaching another ship, so as to involve risk of collision, shall slacken her speed or stop and reverse, if necessary.

ART. 19. In taking any course authorized or required by these Regulations, a steamship under way may indicate that course to any other ship which she has in sight by the following signals on her steam whistle, viz:

One short blast to mean "I am directing my course to starboard."

ART. 23. In obeying and construing these rules due regard shall be had to all dangers of navigation, and to any special circumstances which may render a departure from the above rules necessary in order to avoid immediate danger.

No Ship, under any circumstances, to neglect proper Precautions.

Nothing in these rules shall exonerate any ship, or the owner, or master, or crew thereof, from the consequences of any neglect to carry lights or signals, or any neglect to keep a proper lookout, or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

ART. 25. Nothing in these rules shall interfere with the operation of a special rule, duly made by local authority, relative to the navigation of any harbor, river, or inland navigation.
